

## **MOODY INTERNATIONAL LAUNCHES NEW REAL-TIME REPORTING SYSTEM**

**LONDON, 7 January 2010** - London based Moody International announces the launch of "eReporting" a real-time reporting system that dramatically reduces the time required to report inspection results, improves the quality of the report content and raises the standard of inspections through the use of best practice protocols. Moody International has recognized their clients' needs for a real-time field inspection reporting system that can assist in accelerating decisions, and improve the quality of reports and industry standards.

This breakthrough reporting solution is based on a proprietary inspection protocol or logic that guides the inspector whilst capturing and transmitting data in real time. This is available for a variety of equipment types, and multiple inspection codes and manufacturing practices.

The primary benefits from Moody International's "eReporting" system include; immediate data entry while the inspection is taking place; multi-platform accessibility including handheld devices, laptops, and dedicated internet portals; comprehensive report narrative generated via minimal data entry; logic driven inspection protocol that reflects scenarios/inspection sequences; integral signature and photographic capture; and customisation to fit clients' reporting requirements.

To learn more about "eReporting", please contact us at [ereporting@moodyint.com](mailto:ereporting@moodyint.com) or ask your local representative to provide you with additional details. Demonstrations are available upon request.

Moody International, headquartered in Haywards Heath, UK, has an international network of over 80 offices in 60 countries. It is a leading global provider of technical inspection services, technical staffing and Technical training to the oil and gas, construction, mining and power generation industries and certification services to all sectors.
