

# MANAGED SERVICES

Moody International is a leading global supplier of technical inspection services, management system certification, technical staffing services, as well as consulting and training.

Moody International has a particularly strong presence in the global energy, engineering and construction markets, where its proven ability to respond effectively to the demands of a rapidly changing business environment has secured major contracts with leading international companies.

## The challenges

Procurement, construction, and maintenance projects are complex and often include fragmented disciplines involving multiple parties and cost centres through the various stages of a project's life cycle.

Complications can arise under various circumstances - fluctuating staffing requirements, the need to manage risk, uncertain global supply-chains and increasingly onerous legislative demands.

All of this can result in inherent inefficiencies and, in the worst case scenario, open-ended projects that overrun in terms of both time and budget.

Progressive businesses are constantly scrutinising projects; seeking opportunities to increase profit through improved efficiencies.

## A strategic approach to procurement support and construction / operational management

Moody's core competencies are concentrated in the following areas:

- Product knowledge
- Supplier knowledge
- Market knowledge
- Technical auditing
- Procurement support
- Inspection
- Expediting
- Health and safety management services
- Management system certification
- Health and safety training services

Drawing on the depth and breadth of the company's expertise, Moody International's Managed Service solution consists of a tailored package that affects the smooth transfer of management responsibility for safety and technical procurement related activities, quality related construction activities and subsequent maintenance activities to the eventual owner.

This enlightened business approach opens up compelling cost saving opportunities enabling the redirecting of a client's valuable resources to focus on its own core business.

# MANAGED SERVICES

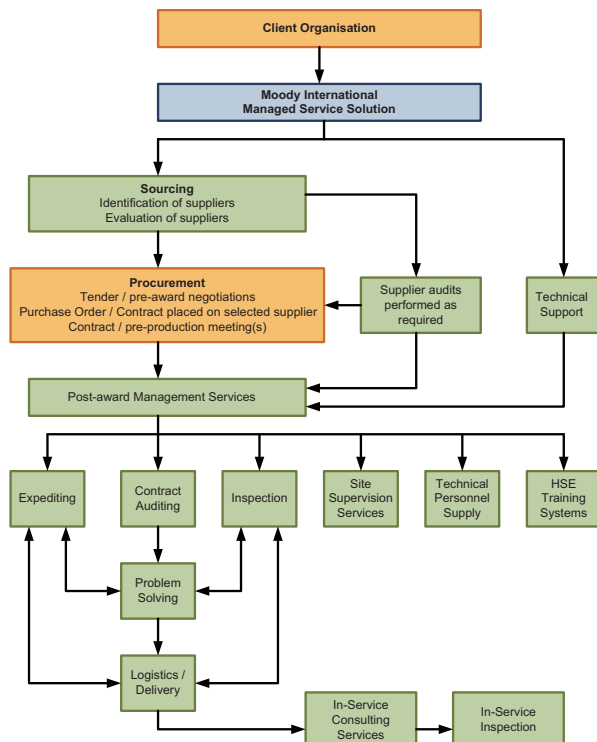

## Tangible benefits

Moody's Managed Services offering strives to deliver sustainable, ongoing supply-chain improvements, resulting in a number of benefits to the clients.

## Improved performance and results by:

- Increased efficiency and value in the procurement process
- Reduced need for large infrastructure resourcing investments
- Minimising business risk
- Efficient management of fluctuating technical staffing requirements
- Improved information availability for planning and decision making
- More efficient use of internal resources
- Ability to involve local personnel with detailed knowledge of local conditions

## A solution as unique as your business

Moody's Managed Services are available to all clients and are flexible, combining only the necessary elements of the services a client may need to improve performance and achieve optimum results.

Whether your requirement is for a complete turnkey solution or a smaller scale support package targeted at specific areas of need, Moody is confident it can improve efficiency and add value to your equipment procurement or maintenance process.

Understanding that every company and every project is unique, no two Managed Services packages are ever the same.

Moody's Managed Services include some or all of the following elements:

- HSE philosophy and consulting services
- Identification of potential suppliers
- Auditing / Short list of suppliers
- Pre-award surveys
- ITP / MPS compilation and approval
- Pre-production meetings
- Technical support and consulting services
- Post-award management

## comprising:

- Expediting
- Site supervision services
- Inspection
- Technical personnel supply
- Auditing
- Problem resolution
- Training
- Safety programmes
- Asset integrity consulting and implementation
- Traceability and documentation systems
